

C31G

C31G is a type of medicine called a microbicide. Microbicides are substances that protect the body from infection by microorganisms such as bacteria, viruses, and fungi. Microbicides work by either destroying the microbes or preventing them from establishing an infection.

HIV/AIDS-Related Uses

C31G is an investigational medicine that is not yet approved by the FDA for use outside of clinical trials. It is being studied for the prevention of HIV infection and other sexually transmitted diseases. This medicine does not cure or prevent HIV infection or AIDS and does not reduce the risk of passing the virus to other people.

Dosage Information

C31G comes in a vaginal gel.

Contraindications

Individuals should tell a doctor about any medical problems before taking this medicine.

Possible Side Effects

Along with its desired effects, C31G may cause some unwanted effects. While not all of these effects are known, vaginal irritation and burning have been reported.

Drug and Food Interactions

A doctor should be notified of any other medications being taken, including prescription, nonprescription (over-the-counter), or herbal medications.

Clinical Trials

For information on clinical trials that involve C31G, visit the ClinicalTrials.gov web site at <http://www.clinicaltrials.gov>. In the Search box, enter: C31G AND HIV Infections.
